Science

Lifecycles and reproduction

In this half term we are looking at lifecycles and reproduction. We would you to create a poster showing the lifecycle of a creature you choose. You can also give more information about the creature you choose like its habit and main features.

Humanities

This term we are learning about sustainability and the economy. We would like you to keep a diary for a day and record every time you do something that uses energy. This could be travelling in the car, using electricity in the home or having a shower using hot water etc... Then reflect and think of how many different ways you can think of to reduce your energy use in order to decrease the size of your carbon footprint?

DT

Create a poster to show how technology has changed our lives (ie) gaming consoles allow us to play with others virtually.
